SUMMARY

Senior Software Engineer with 10+ years shipping across mobile, backend, and developer platforms. Deep experience in identity and security (OAuth, OIDC, SCIM, FIPS, FIDO, passwordless auth), cross-platform SDK development, and full-stack web. Known for taking ownership of ambiguous, high-impact projects end-to-end — from architecture to CI/CD to production — and for elevating the teams and codebases around me.

TECHNICAL SKILLS

Languages:	Swift, Rust, Go, Python, TypeScript, JavaScript, Kotlin, Bash, Objective-C
Mobile:	iOS (UIKit, SwiftUI), React Native, Flutter, Android
Web & Backend:	React, NextJS, Node, Express, OAuth, OIDC, FIDO2, SCIM, PostgreSQL, Supabase, WordPress
Infrastructure:	Docker, Tilt, Bazel, AWS Lambda, GitHub Actions, GitLab CI, CircleCI, Cocoapods, NPM, Vercel
AI/ML:	Claude, OpenAI, MCP, LangChain, text embeddings, vector databases, agent orchestration
Spoken:	English (Native), Spanish (Professional Proficiency)

EXPERIENCE

Beyond Identity | *Senior Software Engineer* 2021 – 2026

SSO Platform

- Served as technical representative during FIPS certification audit, scanning codebase and dependencies for weak cryptographic algorithms and answering auditor questions on inter-service communication and trust boundaries
- Helped build the company's SSO product during a strategic pivot, evaluating open-source tools (Authentik) before building greenfield
- Wrote and maintained backend services supporting OAuth and SCIM protocols in Rust, Go, and Python
- Led platform consolidation effort, unifying two separate products at the database level and migrating APIs to shared tables
- Volunteered to review database migrations ahead of monthly release cycles, analyzing lock behavior and validating against production clones to ensure zero-downtime deployments

Customer-Facing SDKs

- Spearheaded development of Swift and React Native SDKs from scratch through multiple releases, adopted by customers including Sephora (millions of users)
- Authored Rust routes enabling cross-platform code sharing across native and web SDKs
- Architected SDK APIs and drafted RFCs; enhanced Swift SDK with async/await support and SwiftUI protocols
- Authored iOS and Android Native Modules for React Native SDK with TypeScript interface
- Published SDKs via GitHub Actions to Cocoapods and NPM; implemented automated UI tests (XCUITest) and generated docs with Swift DocC

Platform Tooling, Documentation & AI

- Built cost-effective AWS Lambda Python bot using GitLab's GraphQL API to surface active MRs in Slack, adopted by 6+ teams company-wide
- Owned customer-facing developer documentation, collaborating across engineering teams to build comprehensive workflow docs
- Explored LLM-powered documentation search using LangChain with text embeddings stored in a vector database

- Set up CI/CD pipelines: Copybara for GitLab-to-GitHub mirroring, multi-environment support via private Cocoapod repos
- Standardized build and dev workflows with Bazel and Tilt across all services, reducing CI times by several minutes per build

Demo Apps, Open Source & Leadership

- Built iOS demo app in days for CEO to present new product workflows to the board; independently built Acme iOS (SwiftUI) and Acme Web (Next.js, Supabase, Vercel) apps enabling Sales Engineers to demo solutions to customers
- Led NextJS web authenticator rebuild, coordinating stakeholders on hosting strategy and replacing legacy application
- Contributed to open source: Expo Android plugin (PR accepted); built WordPress plugin in direct response to customer conversations
- Led weekly PointFree architecture discussions and delivered regular tech talks; mentored junior engineers on iOS development

American Express | *Software Engineer* 2016 – 2021

iOS Engineer

- Developed travel and account features for the Amex app across 20+ global markets, maintaining 99.99% crash-free rate with millions of active users
- Built with Swift architecture inspired by Elm and functional programming; led accessibility initiative with VoiceOver
- Sped up build times by writing a Python script to query GitHub's GraphQL API, replacing Carthage with direct binary artifact downloads
- Migrated Jenkins test builds to CircleCI; wrote unit, UI, and snapshot tests (XCTest, iOSSnapshotTestCase)
- Participated in hiring and performance management decisions as a senior technical contributor

React Native Tech Lead

- Oversaw all React Native development; designed Brownfield framework and shared component library
- Credited with React Native feature that helped AmEx jump from 7th to 1st in J.D. Power 2018 U.S. Credit Card App Satisfaction Study
- Maintained inner-source project shared between teams; mentored engineers, conducted interviews, and led code reviews

Software Engineer

- Built fullstack JavaScript POCs for mobile and hybrid mobile web apps; developed tooling for linting, bundling, and developer workflows

Juice Crawl | *Founder & CEO* 2014 – 2017

- Founded health-focused startup; press coverage includes Late Night with Seth Meyers, Dr. Oz, and New York Times

PRESENTATIONS

- “Implementing passwordless auth: Passkeys, WebAuthn and FIDO” — Beyond Identity Engineering Meetup
- “How React Native Works” — React Ladies NYC Meetup
- “React Native Brownfield” — React Native NYC Meetup
- “What is React Native” and “Introduction to React Native” — Internal workshops at AmEx

EDUCATION

Stanford CS 193P | Developing Applications for iOS 2018

Grace Hopper Academy (Fullstack Academy) | Voted hackathon lead and alumni representative 2016

Manhattan School of Music | Master of Music, 4.0 GPA 2010 – 2012

University of Missouri | Bachelor of Music, 4.0 GPA 2005 – 2010

ADDITIONAL

Two-time Latin GRAMMY nominee | International Trumpet Competition Winner | White House Performance | America's Got Talent, NBC, Telemundo
